

SURVIVING STROKE WITHOUT DISABILITY

A severe stroke patient is more likely to **live without long-term disability**¹ if taken directly to a Level 1 stroke center² instead of the nearest facility.

65%

of patients taken
directly to a Level 1
stroke center live
**without long-term
disability**

42%

of patients taken to
the nearest facility
**live without
long-term disability**

¹ Living without long-term disability means the patient either lives as they did pre-stroke or does not require daily assistance.

² A Level 1 stroke center has the capacity to provide the appropriate treatment for patients who have experienced an emergent large vessel occlusion (ELVO) stroke.
